2. Common Elements Between Two Arrays

Aim

To find the common elements present in two given arrays.

Procedure

1. Read two arrays from the user.
2. Traverse the elements of the first array.
3. Check whether each element exists in the second array.
4. If the element is common and not already added, store it in a new list.
5. Display the list of common elements.

Result

Thus, the common elements between the two arrays were found successfully.
